I am ever concerned with the quality of food produced in the U.S.A.. Genetically engineered food has created many debateable issues regarding health and the environment.

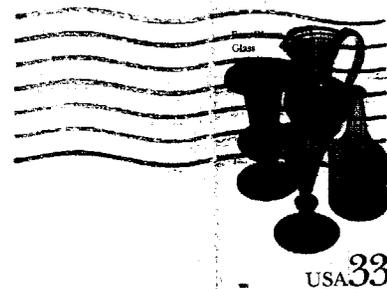

I do not condone the production or sale of G.E. foods. I would be happy to see G.E. seeds and produce banned completely,

but would settle for FULL PRODUCT LABELING on all genetically engineered foods and packaged foods made with G.E. products.

Please make the right decision for our future.
